Magarpatta Go vs. Zomato / Swiggy / Blinkit

Feature gap analysis · April 2026

> Scope note: this is an honest audit of what the three category leaders have that we don't yet. Many of these features are **deferred on purpose** (we're Phase 1 with 4 riders and one township). The list exists so we know what to build when, not what to build now.

Legend:

- ✅ **Built** — shipped in our codebase
- 🚧 **Partial** — skeleton exists, not production-ready
- ❌ **Missing** — not yet implemented

Priority ladder for Phase 1 → Phase 2

Phase 1 remaining (next 6 weeks):

1. Coupons / promo codes — *unlocks marketing loops*
2. Restaurant / shop detail pages — *improves discovery*
3. Reorder from past order — *one of the single highest-leverage retention features*
4. Multi-address labelled (Home / Work / Other) — *small change, big convenience*
5. Push notifications (web push first)
6. Rate + review on delivered order — *feeds the rating → ranking loop*
7. Hamburger nav + mobile polish
8. GST-compliant invoice PDF
9. Vendor open/close hours
10. "Currently busy" indicator

Phase 2 (months 3–6):

- Real rider app (replace demo tracker)
- Vendor app (replace manual seed scripts)
- Real-time GPS tracking on Mappls
- Razorpay live checkout
- Loyalty / subscription
- Dynamic delivery fee
- ML recommendations

- Referral program
- Multi-language i18n

Phase 3 (6+ months):

- Gift cards, wallet, cashback economy
- EMI / corporate accounts
- Tip the rider
- Allergen / nutrition data
- Kitchen POS integrations
- Native mobile apps

What we already have that's *better* than the big players

To be fair, a hyperlocal startup has advantages:

- ✅ **Strict geofence** — no "surprise out-of-zone" on delivery. Zomato/Swiggy happily take orders they can't fulfil well at the edges.
- ✅ **Address-precise building register** (259 buildings, 16 societies mapped) — Zomato's address graph is national and shallower at the building level.
- ✅ **+₹1 transparent markup** on non-MRP items — Blinkit hides margin in price; we disclose it at checkout as a line item.
- ✅ **Neighbour riders** — trust + accountability the generalists can't match.
- ✅ **Tower-level group orders** (Phase 2 planned) — structurally impossible for a 15-city player to do well.
- ✅ **Lift-aware ETA** (Phase 2 planned) — specific to our geometry.
